

The AI Agent Playbook

Table of Contents

1. Cut through the noise – focus on value, not hype
2. From problem to pattern – design AI use-cases that matter
3. Prompt like a pro – craft smart, high-impact prompts
4. Think in systems – move from one-shot tasks to smart agents
5. Use prompt formulas – match structure to task complexity
6. Automate with confidence – build no-code, real-world workflows
7. Build AI playbooks – create scalable AI solutions
8. Get buy-in – align projects with business goals
9. Design for humans – build trust into your AI
10. Pilot & scale – test, learn, and roll out effectively
11. Your AI operating system – create your personal GPT workflow

Who It's For

Innovation managers, consultants, business unit leads, and professionals who want to:

- Save time and make better decisions
- Move beyond manual prompting into system-level thinking
- Build real AI tools without writing code

About Noam Sharon

"I've spent years fusing design thinking with AI breakthroughs. My passion lies in empowering others to harness technology without getting lost in it. Together, we'll streamline your innovation process and equip you with practical tools you can use today."

— Noam Sharon
